

## Factsheet

# SEW MOVITOOLS

## SEW MOVITOOLS

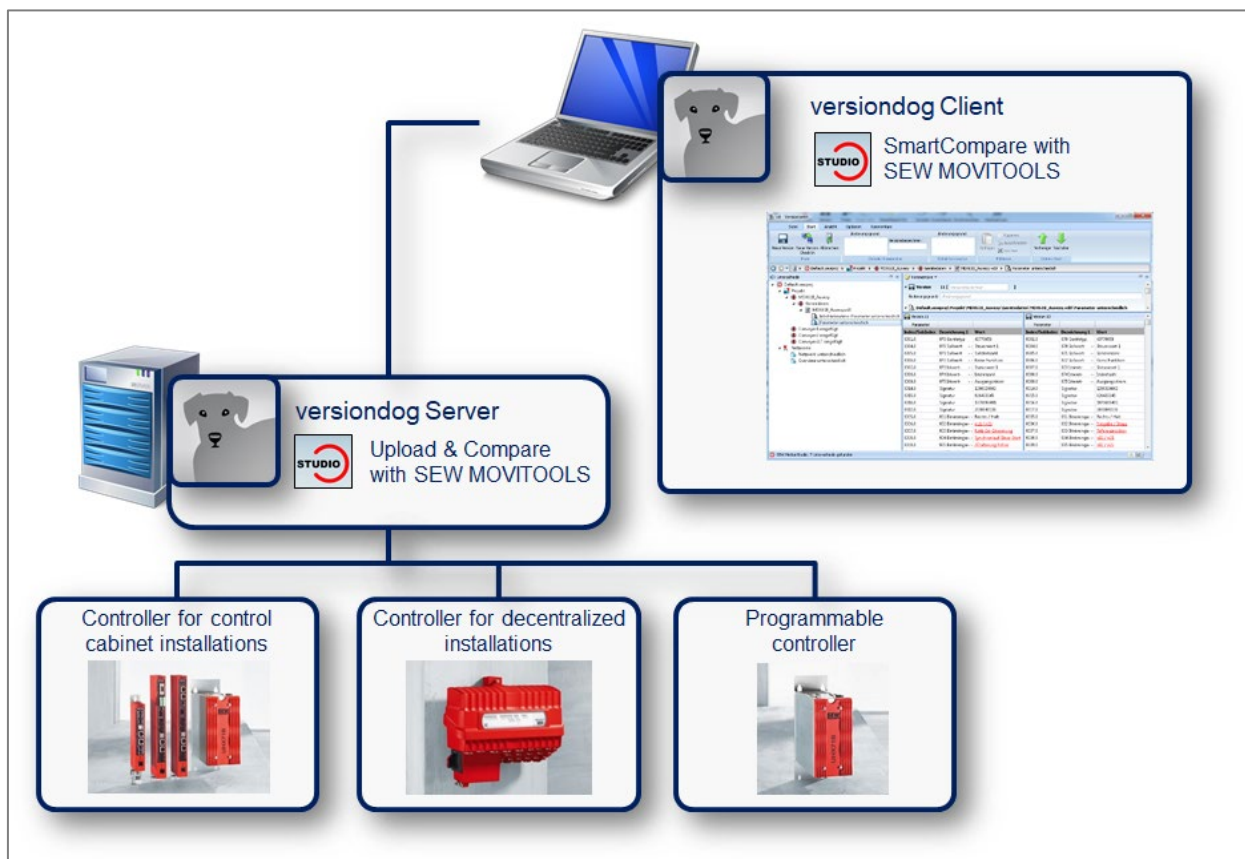

### versiondog - For more efficient production

versiondog is the leading version control and data management software solution for automated production. It makes tracking changes and safeguarding data significantly more efficient.

versiondog brings order and clarity where project data needs to be continually changed and made available from a central source. The increased safety, security and certainty provided by this software system quickly results in measurably increased productivity. versiondog makes it easy for you to optimise the interplay between all your different types of robots, controllers, field devices, drives, programming languages, file formats and software applications.

This data management system gives you ultimate data traceability, minimising your risks and costs, and saving you time and effort.

### Support for SEW MOVITOOLS projects

## SEW MOVITOOLS

### Integration

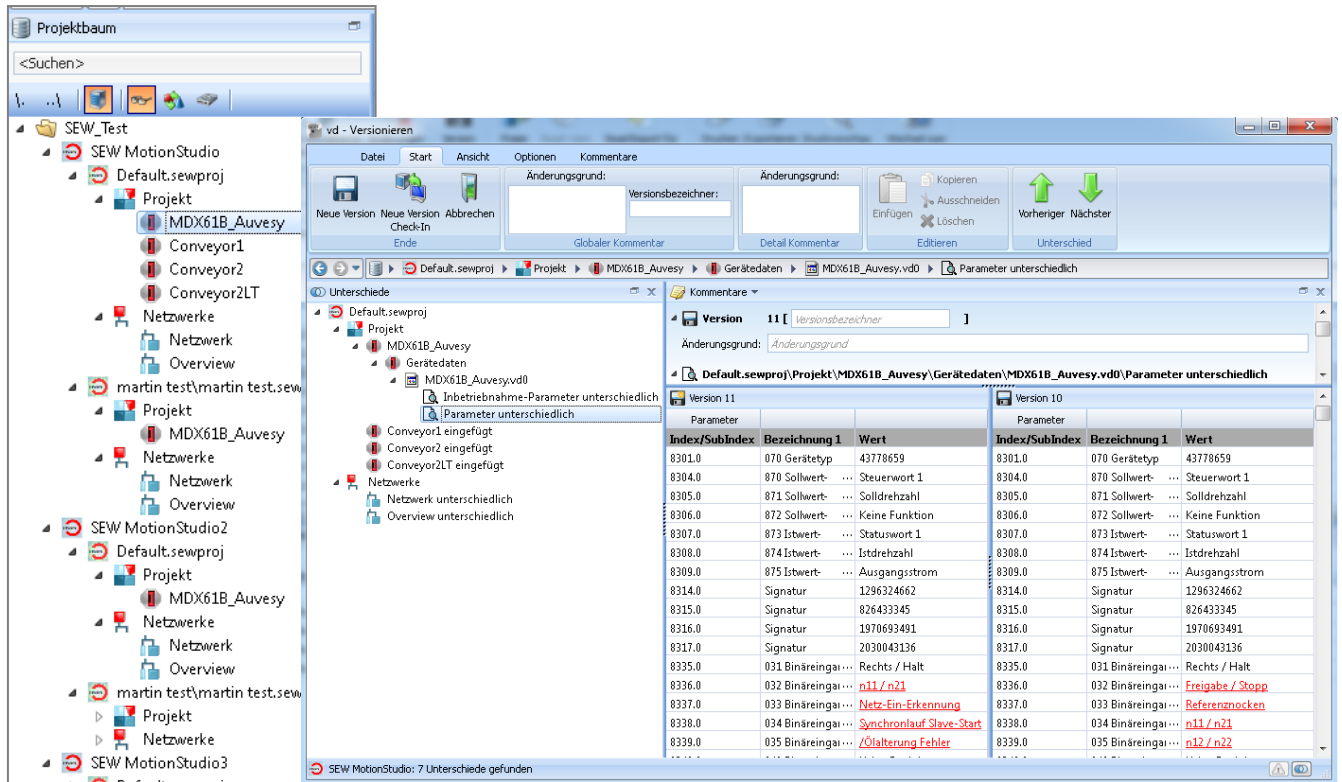

Fig. 1: Integrated SEW MOVITOOLS project tree

Fig. 2: Detailed graphical comparison of two versions

### Features and functions

Integrated SEW MOVITOOLS pro	✓
Detect differences between the backup and the version of the program. Detect changes to program data running on the device.	✓
Clear presentation of complete change history	✓
Detailed graphical comparison	✓
Open editor directly from versiondog	✓
Custom upload configuration for SEW MOVITOOLS	✓
Custom component type for SEW MOVITOOLS	✓
Tutorial available in versiondog INFO	✓

### System requirements

versiondog release	version 3.3.3 onward
SEW <ul style="list-style-type: none"> <li>MOVITOOLS</li> <li>MOVIDRIVE</li> <li>MOVITOOLS-MotionStudio 5.6.0 SP1 to 6.0.0.1</li> </ul>	
.NET Framework	3.5
