Decentralization of upload and compare functionality

Delegates upload and compare to other systems for better performance and more flexibility

- **Cross-network upload**
- **Load balancing**
- **Remote comparisons**

What does it do?

- Enables load balancing by executing upload or compare on other systems
- Enables you to perform a remote compare without a local editor
- Can be used to perform a cross-network Upload
- Online backup of WinCC runtime during operation

What are the benefits?

- Reduces manual work when creating and managing backups
- Easy to install and easy to use
- Increases performance of server systems by reducing their workload
- Custom comparison and upload solutions
- Can be used for load balancing of uploads and compares
- Reduces license costs because comparisons can be carried out on already existing systems

Are there any requirements or costs?

- Active versiondog server licence required
- versiondog Upload & Compare Agent add-on
